

Uniformed services

Operational Resources Management System

OPERA has been successfully implemented in Frontex and Member States

Purpose

Asseco Poland S.A. specializes in the production and development of software and as the largest software house with Polish capital is proud to successfully compete with the worldwide market global companies. As a leader in the Asseco Group, we focus profitable companies in the IT sector.

Asseco Group is a federation of companies engaged in information technology. We offer comprehensive, proprietary IT solutions for all sectors of the economy. Own solutions account for over a half of Asseco Group total sales revenues. This puts us among the top ten software vendors in Europe.

International Organizations and the Uniformed Services Division of Asseco Poland develops software for command and crisis management systems for operational and tactical levels. The experience gained by the Division in implementation of military command systems and operation in an environment of classified systems successfully used in building applications for border protection and crisis management.

Developed systems are dedicated solutions for certain customers' needs

The quality and standards

Our projects are executed according to the best practices and methodologies that help us in the professional achievement of the objectives in the demanding environment of the international organizations and uniformed services:

Security

- We operate in the technical and organizational environment of classified systems Certificates of industrial and personal security EU SECRETProject Management
- We manage programs and projects based on best practices and own solutions PMI, Prince2Development Process
- We use a professional organization of product development cycle CMMIOrganization of work
- We care about efficiency and flexibility of our development teams Scrum

OPERA Purpose

The main business objective for OPERA is to provide the capability to plan and manage operational resources. In particular:

- providing on-line database of border guards belonging to the EBGT Pool
- providing a resource deployment tool used for planning, allocating and monitoring resources related to the operations handled by Frontex
- automatic generation of accreditation / participant documents
- enabling monitoring of operational resources

OPERA Functionalities

OPERA is an IT system that improves Frontex and Member States capabilities to plan andmanage operational resources. Opera provides the following functionalities:

- defining needed technical equipment and human resources
- sending requests to MS for availability and accepting resources
- creation of Accreditation Documents
- managing deployed resources
- generating reports
- defining the Running Expenses of Means (REM) for the reimbursement of the assets deployed in Frotnex coordinated activities

Operational workflow
